**IN AN EMERGENCY
EVERY SECOND COUNTS**

OVERVIEW

Radar is an AI-powered home emergency response system that uses Wi-Fi frequencies, computer vision and multiple specialized AI agents to save lives.

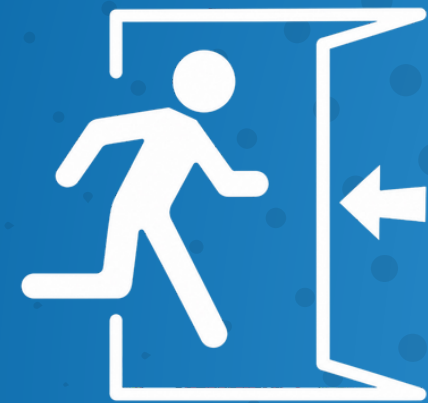

WHY RADAR?

Radar provides context when other security systems do not.

- **Fewer false alarms — 94–98% of police burglar-alarm calls** have historically been reported as **false**. Radar is designed to use camera, identity, movement, and Wi-Fi sensing together to provide **more context** before escalation.
- **Real-time situational awareness** — Radar doesn't stop at “motion detected.” It is designed to track who is present, where they are, and how the situation changes throughout an incident.
- **Better context for 911** — 911.gov says dispatchers need information including location, nature of the emergency, descriptions of people, and injuries—exactly the types of information Radar's agents are designed to collect.
- **Help even when you can't reach your phone** — Radar alerts the **Apple Watch and iPhone**, allowing a user to initiate and interact with the incident from their wrist.

When every second counts.

HOW IT WORKS

Intruder enters home

Laptop (acting as sensor) detects movement from WIFI Frequency admitted by router signals

Laptop detects movement, cameras activate along with computer vision

Owners confirm safety on mobile app or watch

Safety unconfirmed, agents get to work

Agents call 911, talking and documenting to operator

Footage documented for investigation is stored in MongoDB. From database information is sent to authorities through resend

Web app for emergency dashboard is hosted on Vultr. Gemini gives video analysis.

Agents that save lives

RADAR'S AGENTS

Replay

Logs Incidents and movement
for post-incident review
(Investigations)

ans://v0.1.0.intruder.batradar.club

Master/Incident Type

Coordinates all other agents,
aggregates info, routes to call agent

ans://v0.1.0.master.batradar.club

Shutter

Has the skill to one GPIO pin,
verify a grant, move 90°, and
refuses everything else

ans://v0.1.0.shutter.batradar.club

Intruder Tracking

Identifies and tracks unidentified
persons through WiFi connection

ans://v0.1.0.intruder.batradar.club

Vision

In charge of the camera, personhood,
narration, and mp4 to disk

ans://v0.1.0.vision.batradar.club

People Tracking

Checks number people of all
times and location of members
through the camera

ans://v0.1.0.presence.batradar.club

Call

Communicates with 911 operator
via phone call with information
organized by the Master agent

ans://v0.1.0.caller.batradar.club

Why so many agents? Creating these images minimizes context and creates efficiency
